Commitment to quality shows as GW Views visits Ivor Searle

Core product offering continues to grow for independent garages seeking value without compromising quality

In addition to its range of engines, the company's remanufactured product portfolio also includes cylinder heads, gearboxes and turbochargers.

Following the recent launch of its professional DPF cleaning service, GW Views takes an exclusive behind-the-scenes tour at Ivor Searle to find out how the brand is establishing itself as a one-stop-shop for core automotive components.

Ivor Searle is renowned for its remanufactured engines, which are built to the BS AU 257:2002 standard set by the British Standard Institution to define the different between reconditioned, refurbished or a rebuilt engine and a quality remanufactured unit.

Speaking to Ivor Searle's commercial director, David Eszenyi told GW that all of its remanufactured engines are thoroughly tested in purpose-built test cells.

He said: "All new replacement parts used in the remanufacturing process are sourced for their reliability and durability.

"We test all engines prior to final inspection and dispatch.

"With over 400 units in stock and a highly knowledgeable, expert sales department, we are focused on delivering first class customer service, every time."

In recent years, the remanufacturer has applied its extensive experience and commitment to quality into other core vehicle components including turbochargers, gearboxes and now also DPFs.

Professional DPF cleaning service

Using state-of-the-art “flash cleaning” technology, an environmentally-friendly water-based process delivers as-new levels of cleanliness by removing all soot and ash deposits, including PM10 particles, cerium oxide deposits and oil residues, from the DPF.

Analysis by Umicore, one of the world’s foremost automotive DPF and catalyst manufacturers, has confirmed that there are no remarkable differences between a DPF cleaned using the same technology employed by Ivor Searle and installing a brand new unit.

Ivor Searle’s fast turnaround professional DPF cleaning service offers independent workshops competitive

advantage by offering a low -cost alternative to component replacement.

All Ivor Searle professionally cleaned DPFs are provided with a detailed inspection report and are covered by a no quibble 12-month unlimited mileage warranty.

Turbochargers

Every Ivor Searle turbocharger undergoes the same intensive remanufacturing process, which involves a complete strip down and thorough cleansing using pyrolytic technology.

The remanufacturing process involves a complete strip down and thorough cleansing using pyrolytic technology, after which all internal components are automatically replaced.

All external housings are meticulously examined and checked against OE specification and any non-conforming components are also replaced.

David said: “Our turbochargers undergo stringent quality checks and test procedures throughout the remanufacturing process to ensure maximum durability and service life.

“Prior to final assembly, the turbocharger’s rotating assembly is then balanced on the latest computerised VSR equipment at speeds of up to 250,000 RPM and oil flow rates are checked at the same time.”

Gearboxes

When it comes to gearboxes, Ivor Searle’s same intensive remanufacturing process is applied.

Transmissions are stripped down, thoroughly cleaned and inspected against OE specification.

Bearings, seals and gaskets are replaced and all other parts are checked against OE specifications with non-conforming items replaced.

David added: "All Ivor Searle engines, cylinder heads and gearboxes are covered by a transferable 12-month unlimited mileage parts and labour warranty.

"A 24-month warranty covers our turbochargers.

"All Ivor Searle units are supplied with pre-installation guidelines, as well as model-specific instructions if required.

"We are also pleased to offer free next-day delivery throughout the UK mainland on our stock items, if ordered before 3.30pm.

"Our extensive distributor network ensures that wherever you are, you're not far away from an Ivor Searle quality product."

Ivor Searle's website allows technicians to search quickly to check availability and to order stock items for next day delivery with just a few mouse clicks.
