

# Ivor Searle unveils 'E-Cat' as turnover increases

Automotive remanufacturer Ivor Searle has launched a website e-catalogue capable of looking up vehicle registrations across multiple countries.

The launch came after the company reported another record 12-month trading performance, reflecting a further 8% increase on its previous record turnover in 2024.

E-Cat is linked to the global TecDoc aftermarket database. Customers can enter vehicle registration details to identify product codes for a specific model and check availability.

Commercial director David Eszenyi (pictured) said: "We continue to innovate to support a wider aftermarket community in the UK and internationally."
